# Welcome to 2023

In reflection of 2022, it was an outstanding year for our on property sale and it exceeded all our expectations, it was very pleasing to have sold multiple stud sires to multiple states. I feel very honoured to have been chosen to be a seedstock supplier and thank fellow breeders and clients for their on going support. In 2022 we are also pleased to have purchased a new sire to add to our sire battery. 2022 finished of a challenging wet year as it did for many of you. As we click over into 2023 and prepare for another season, we are excited with our young stock and have progeny from multiple sires. In this years young rams we breech wrinkle scored for the first time and have trailed leaving two thirds of them unmulsed, as we have lots of unmulsed clients. We continue to mulse the balance of our

commercial flock as I believe it complements our management. I am looking for clients feedback but feel it is necessary to offer more rams in our on property auction, as I believe this will give our clients a more even opportunity at our leading end, we will still be offering rams privately, but ram sale day is a great opportunity to fulfil your needs in one visit.

We are set to have an extensive open day of our rams , ewes and lambs, this will include shearing of sheep so you can see what our sheep are doing out of the paddock with your own eyes and hands.

In the current environment I feel like maximising production per head or per hectare is vital as the wool and meat price has softened and producing as many kilos of wool and meat is king, as we continue to push our production limits.

*Tim Poffinghorne*

**MICRON 19.3** **S.D. 2.8** **C.V. 14.5** **CF% 99.9%**

He has a great purity and softness. He is a genuine cutter with exceptional staple length and safe waxy wool that can handle high rainfall. Full ET brother to 210016.

[WWW.BANAVIE.COM.AU](http://WWW.BANAVIE.COM.AU)

210013 created a lot in interest from his first public showing in Bendigo. Regarded as the best Ban 009 son we have bred. We were going to retain him as a leading sire, but after strong pressure from a number of parties locally, nationally and internationally we decided to offer him in Lot 1A on ram sale day.

He is a complete package of structure, wool cut and correctness. His width behind and purity were highlights and being a combination of our Neil family and East Mundulla Masterbult gives this sire a perfect balance of wool and carcase virtues.

After a nervous start to the bidding, auctioneer Andrew Sloan soon enticed the bidding gallery to enter the market and bidding quickly moved through to the \$80,000 final bid. We were very proud to offer a ram that we held in such high regard, in the transparent conditions of a public auction.

We are also very grateful the Gooding family from East Mundulla Merino Stud, were able to secure the ram. Our studs have a history of making impacts for each other and it appears our breeding philosophies and genetics just seem to click. To Slippers and Daniel thank you and we look forward to seeing what you can do with "80K".

Special mention also to the underbidders, most of you have used Banavie genetics in your studs in the past and your continued support of our stud and our genetics drives us to breed sires of exceptional quality for you to use in your breeding programs.

# 2022 Ram Sale Report

It was a cracking day in more ways than one for our annual on property ram sale. We had an increased offering of 91 Rams after the late addition of Lot 1A to commence the day, which we sold to a complete clearance and all time high average of \$5489. Lot 1a topped the sale at \$80,000 to East Mundulla Merino Stud. Lot 68 made \$32,000 to Capree Merino Stud. Lot 62 \$24,000 to Gerando Pship. Lot 61 \$16,000 to The Snuggery and Lot 78 \$13,000 to Merna Farms WA.

We continue to breed and offer Horned Rams breeding mainly from the elite end of horned ewes in the stud. Our horned rams sold to a top of \$8000 to North Ashrose Merino Stud SA, and were well supported by commercial clientele to average \$3750.

It was the first year offering sons of two of our leading sires Ban 009 and Big Dave. Ban 009 had 17 Sons make the sale which averaged \$8853 and Big Dave had 16 Sons which averaged \$6531. We also kept a number of sons from these sires which now make up the majority of our sire battery moving forward.

Stud and Commercial Rams were dispersed far and wide ending the day heading to five states. We are pleased to offer rams that can suit the Wheatbelt in WA to higher rainfall environment of Eastern Tasmania and everywhere in between, all in one ram sale.

## From our Stud Advisor, Andrew Calvert

I have always believed if you're in the business of producing something to sell then its vital whatever the article is it needs to remain relevant to the market. Breeding animals to sell is no different, they need to be both relevant and commercially viable. The ultimate determiner in a Studs business is its clients, in simple terms if they are successful, so should the Stud supplying the genetics be. Banavie have been bred along these objectives for over 100 years, the principals understand the responsibilities they have as a leading supplier of Seedstock to the Merino Industry.

I am strongly focused on breeding sheep that are structurally sound, efficient converters capable of achieving good cut to micron, their wool should be soft and nourished. Fertility is critical as is a good carcass. One of the real positives of the Banavie type is

its dual-purpose attributes, they are also ideally suited to shearing 3 times in 2 years or every 6 months. With the current wool market this can offer huge financial benefits.

Andrew Calvert - Stud Consultant. 0418 130 155

# Pre-Joining Tips For Your Rams & Ewes

## A message from our breeding technicians David and Ros Kennett

### RAM PREPARATION PRE-JOINING

- Shear rams at least 6 weeks prior to joining – rams should be shorn and 6in1 vaccinated twice each year.
- Check mouths, feet and testes 6 weeks before joining. Testes should be palpated to ensure they are firm and springy with no lumps. If you are unsure of this contact your local vet.
- Commence feeding 250 grams of lupins per head per day a minimum of 4 weeks prior to joining (peas or beans will suffice)

### EWE PREPARATION PRE-JOINING

- Ensure ewes have sound mouths, feet and udders
- Keep ewes isolated from the smell and sight of rams to prevent the ram effect. Isolation means rams / ram lambs should be a minimum of ONE KILOMETRE away or as far away as is practical or achievable. This is most important with Spring mating and applies from weaning.
- Good body condition (CS 2.8-3.0) - NOT over fat. Ewes should be on a rising plain of nutrition. Lupin supplementation for 2-4 weeks prior to joining is highly recommended at the rate of 200 grams per head per day. Feeding will vary with the season and available feed. It is recommended not to run ewes on lucerne pasture or excessive clover prior to or during joining.
- Synchronising Paddock Mating  
Introduce vasectomized rams or testosterone treated teasers to ewes 2 weeks prior to joining to synchronise mating.

**GENSTOCK PTY LTD**

# Banavie Commercials thrive on Canola

In the later stages of 2021 dad purchased a property in Koondrook which has allowed us to have a play with some irrigation. Dad challenged myself to try something different compared to home with a paddock. Which after a summer of thinking we decided to try to finish a portion of our commercial wether lambs on crop rather than feedlot or stubble.

In the last week of March we planted 38 HA of 970 Canola at 3.5kg/Ha and watered it. On the 17th of June we carted a run of 707 June/July commercial 2021 drop lambs off shears @ 40kg liveweight up there. At a stocking rate of 18.4 Head per hectare with Canola to our knees, let see what we can achieve!

We returned and yarded on the 1st of August and loaded a B-Double with 686 lambs. Our results were:  
Average Carcase Weight Gain per head: 6.7Kg in 45 Days  
Final Average Carcase Weight : 23.7kg  
Final Average Liveweight: 52.66Kg Full.  
Average Liveweight Growth Rate per Day = 14.88KG Live / 45 days = 330.66 Grams per Head per Day.

AWN Wimmera Area Manager Wayne Driscoll said "A growth rate of 330g per day is due to the 970 Canola and Banavie Merino genetics combining to achieve an Industry high end result. It must also be said that these wethers cut 17 micron wool grossing \$58.00 before they were sent up there." In conclusion we achieved a good average price for the season for our meat further enhancing the importance of weight gain in this equation.

Average Carcase Weight Gain per head: 6.7Kg in 45 Days @ \$7.20 per kg plus \$1.50 skin x 18.4 head per HA = \$915.21 return per Hectare to date.

When the sheep were removed we let the Canola recover for 10 Days, applied grass spray and 120kg/ha of Urea aiming to Harvest 3T/Ha of Canola at approx. \$700 per Tonne later this year. We are very excited about the finishing potential of our sheep on crops, it allows us to keep haysheds full and grain in silos, it also gave us carrying capacity when we are traditionally at our tight winter lambing period.

## A new sire purchased for \$50,000 from East Mundalla

The decision was made to purchase "Rossco" from the Gooding Family to compliment our size, bone, structure and quick maturity. We look forward to offering sons from this exciting addition. His lambs are showing bone, barrel and early maturity and good skins. An exiting addition that will compliment the future of Charinga and Banavie.

**Imp 111-210940 June drop. MIC 19.9, SD 2.7, SV 14.1, SC 19.8.**

# Ban 180190 Dominates 2023 WA Show Circuit

Banavie 190 was our Top Priced Auction from 2019. He is an AI bred Masterbuilt Son and was purchased by the Thornlea Merino Stud in Harrow Vic for \$35,000. Described at the time as one of the most complete sheep Banavie had ever offered, he has excellent width and depth of body and he carries very well aligned heavy cutting wool with true fibre density.

We are every excited to congratulate the Rangeview and Overton Merino Studs on their success with Ban 190 progeny during this years show circuit in WA.

The Supreme Exhibit of both Wagin Woolorama and The Williams Expo was a Rangeview ram named Lawry. He is a medium wool, ET Bred son of Banavie 190 X Rangeview 645.

Ban 190 Progeny also won:  
Grand Champion Poll Ewe, Reserve Grand Champion Poll Ewe, Champion Fine Wool Ram, Champion Fine Wool Ewe, Champion Fine Medium Ewe, Champion Medium Ram, Champion Strong Ewe, Reserve Champion Fine Ram, Reserve Champion Fine Med Ram, Reserve Champion Strong Ram.

The WA Pair from Rangeview Merino Stud are both Ban 190 Progeny,

We wish Rangeview all the best for the upcoming Australian Sheep and Wool Show where they will be exhibiting and also offering progeny of Ban 190 in the ram sale. Including Supreme Exhibit Lawry in Lot 94.

This ram is a big upstanding young sire with ex width and length through the body he has great feet and structure with exceptional bone and balance he has a very high rump and stands proud with and outstanding quiet nature he has excellent staple length bold horseshoe crimping aligned richly nourished densely fibred heavy cutting wool.

It was a pleasure to see this outstanding young ram go to the McClure Family, and we wish them all the success with ram and hope he gives them a sound foundation for their poll stud. They have been a great supporter of Banavie for a long period of time.

***“Every once in a while, as you chase after making an impact you get to experience the moment it all comes together, all of the planning, all of the risk and all of the work. All of that creates something pretty special”***

Sire: Charinga Neil 170009      Dam: Rifle 160022

Mic 19.0	SD 3.3	CV 17.4	CF 99.3	WoolCut 184%	Ywt 4.3	Yfd -1.3	Ycfw 31.3	MP+ 175.71	FP+ 161.26	DP+ 165.48
7 months shearing: 19.0 mic 16.4 Kg				Body Weight	July 2022	143kg				

Described by Roger as “One of the best skin sheep ever seen on Banavie”, this young ram was anointed with the “009” tag number, as a tribute to his father. This ET bred sire is as exciting as any Poll bred at Banavie in recent times. The genetic combination does not get much better than this... His Sire “Charinga Neil” and his mother is ET bred from Banavie royalty, being a “Rifle” (130303 \$30,000) daughter, by 110016, which is \$60,000 130333s mother.

009 has super soft richly nourished pearly white wool. He is loaded with fibre due to his outstanding fibre alignment, which consists of deep horseshoe shaped crimp which when inspected carefully folds completely back onto itself. This highly elastic fibre is beautifully cylindrical, allowing it to grow extreme staple length and super staple strength within highly compacted fibre bundles creating true density. His high secondary to primary fibre ratio, creates a low suint and high wax nourishment which will protect the fibre in all climatic extremes.

Equally as important, that along with his extreme skin, 009 presents with a strong constitution. He has a pure open face, big barrel, and stands tall with a proud outlook. He has strong bone in his legs with excellent length in the cannon bone and correct feet and pasterns. 009 is from one of the heaviest wool cutting families in Australia, his fibre quality and production comes from his father and his structural soundness, make and shape come from his mother, he will go on and make a meaningful impact to both stud and commercial flocks throughout the industry and we are very proud to call him a Banavie.

6.1	-0.5	17.7	148.76	138.33	149.29

This Magnificent Sire is the result of years of selection all coming together in a single genetic package. Selected by Roger at lamb mothering as the one “we must keep an eye on”, 266 has grown and developed into the exceptional sire he, through years of ET and AI has ultimately been selectively bred to become. A combination of virtues from Big Tom, Pearler, Jonty and Buddy genetics have all combined to produce this super star.

His father “Gilbert”, was prepared and managed in the Banavie ram shed in 2018 and this ram has many of the old boys great attributes. He has a genuine presence in the ram shed, he holds his head high and proud. He is quick maturing and already has a big broad muzzle like his father with a sires hornset. His growth rate is exceptional due to his heavy bone, length of body and perfect structure. His wool is bold deeply crimping, with excellent thickness and lock. It is richly nourished, well aligned fibre which pushes wool cut production on an uncomplicated pliable skin.

We look forward to watching the impact this ram has on the Merino industry and the continuation of the “Gilbert” family which is held in high regard at both Banavie and Charinga.

### WORKING DOG SCHOOL RAM SELECTION INFO DAY

Join us for a masterclass on working dogs with Chris Stapleton multiple winner of the Australian championships and an Australian representative competing overseas. Capree Eve (pictured left with Chris) was sold for the Australian record price \$49,000. Chris will be on site sharing some inside knowledge by running a working dog school, but spaces are limited to around 5 dogs, so please be quick to contact us to book a space.

Roger Polkinghorne from Charinga Merino Stud will also be conducting a talk on ram selection, structure, skin and wool quality, His insight on understanding fleece nourishment, wax swint, fibre alignment and density will also be shared.

Join us for a great informative day!

**Please contact us if you would like any further information and let us know if you are going to attend.**

**Friday 22nd September  
10:00am at Charinga**

**with Chris Stapleton winner of the Australian championships**

**COME AND EXPERIENCE IT FIRSTHAND!**

**CONTACT: Roger 0427 358 168 or Tim 0427 317 846**

**Dog numbers are limited, so please be quick to enquire.**

Notes:

Banavie Principals Tim, Karina and family flanked by the Banavie team.

Renowned for having strong bone, excellent wool density and elite wool quality the Banavie type is easily distinguished in stud families and commercial flocks across Australia. Since purchasing Banavie in 2001, we are pleased to see the continued impact and industry influence the Banavie type is having.
